Reason for Allowance

Applicant's arguments filed 9/18/07 (pages 14-19 of the response) with respect to claims 1,3, 5-7, 10-15,17-50,52-62, and 64-74 have been fully considered and are persuasive. The rejection of the claims has been withdrawn from the previous office action mailed 10/2/06 and therefore the claims 1,3, 5-7, 10-15,17-50,52-62, and 64-74 are allowed.

Allowable Subject Matter

The invention of independent claims 1,36,59 is directed towards a positioning information distribution system comprising;

- a plurality of satellite data receiving stations receiving data from at least one satellite in a positioning system and performing a plurality of satellite specific operations comprising: extracting satellite information, calculating differential correction data relative to its own position, and transmitting satellite specific data including said satellite information and said differential correction data via a data link for each satellite in said positioning system from which data was received;
- an information processing station coupled with said data link, said information processing station receiving a plurality of said satellite specific data transmissions from each of said plurality of satellite data receiving stations, conjoining said plurality of satellite specific data transmissions into a data file comprising satellite information and differential correction data, for a plurality of said satellites in said positioning system and distributing said data file via a network;

- a mobile unit including a positioning system receiver and a data processing unit, said mobile unit accessing said network and receiving said data file without providing any location information to said information processing station, said mobile unit selecting a portion of said data file correlating to satellites being in line-of-sight of said mobile unit and utilizing said portion of said data file to assist in computing a measured position of said mobile unit.

The primary reference Diggelen discloses a method and apparatus for locating mobile receivers using a wide area reference network for propagating ephemeris

The secondary reference Fan, in the same field of endeavor, discloses a method wherein the information processing station connected to and accessible via a data network, stores differential correction data

However, the prior art references individually or in combination fails to render the above underlined unique feature obvious. Therefore the independent claims 1,36,59 and their dependent claims are allowed.
